TERMS AND CONDITIONS OF SALE

FIFTY ROOTED CUTTINGS OF A VARIETY is the MINIMUM that can be supplied.
MORE THAN 50 of a variety must be in MULTIPLES of 50.

CANCELLATIONS or CHANGES of orders must be received at last 30 days prior to shipping date.

TERMS OF PAYMENT

2% discount allowed on payment 10 days from date of invoice. Sixty days net.

No quantity discounts allowed regardless of the size of the order.

METHOD OF SHIPMENT

We recommend shipping via Air Freight or Air Express wherever possible. Air lines are prepared to phone nearby customers on arrival for pick-up, and for customers too far away from the airport, they will reconsign shipment via the Railway Express Agency to destination. Where shipments are not ordered Air Freight or Air Express, they will be forwarded via Railway Express.

DISCLAIMER

1. We make no warranty, expressed or implied, as to kind, description, quality or productiveness of any stock and we will not be responsible for crop.
2. We will not be responsible for any errors or omissions and in no event shall our liability for any claim of loss or damage due to any cause whatsoever be greater than the invoice value of the merchandise. This order, if accepted, is subject to pro-rata delivery if conditions in our sole judgment justify it, either on account of short crop, prior sale or for any other reason. We will not be responsible for delays, damages or loss in transit. Our liability ceases upon delivery to the common carrier. All orders subject to acceptance by home office.

CHECK YOUR ACKNOWLEDGMENTS

It is most important to read our acknowledgment of your order. This indicates delivery date our grower estimates can be made. It frequently happens that we have to list a different delivery date than the one called for, and it is necessary that you know this when the order is confirmed.

METHOD BY WHICH VARIETIES ARE LISTED IN THIS CATALOG

Both Pompon Types and Standards in our list are grouped by color and number of weeks required to flower when grown under controlled blooming programs. 8-week varieties require 8 weeks to come into bloom after shading is started for summer and early fall blooming, or 8 weeks after lights are discontinued and shading is started for late winter and spring blooming. 9-week varieties require 9 weeks, 10-week varieties require 10 weeks, etc. These groupings are based on conditions at the 40th parallel, and there would be some variations in localities very much farther north or south of this latitude. Normal blooming dates are also indicated.

Cultural Suggestions

Start out with the best cuttings available. Our stock is produced and shipped by Chrysanthemum Specialists. There is none better.

CARE OF CUTTINGS WHEN RECEIVED

Upon arrival of the cuttings examine them immediately. If they have been delayed in transit, some damage may have occurred along the way. If the roots should be dry and plants are wilted, soaking them in about 1 inch of water for about 1 hour will revive them greatly.

If they should have become heated and some fungus has developed, dipping them in a solution of Fermate, 2 tablespoons-full to 1 gallon water, will stop any further spread of the fungi. Of course, if the shipment has been delayed too long and the plants have stretched or turned yellow, or should be badly frozen, file claim with the Transportation Company immediately.

SOILS

Chrysanthemums will grow in about any type of soil provided it has reasonable drainage. Steam sterilization before planting, if it is possible, will prevent disease and weed growth. The soil should be low in nitrates at planting time, but should be built up by feeding after the plants have become well established.

WATERING

Cuttings should be watered very liberally as soon as planted. Mums need plenty of water during their entire period of growth.

PINCHING

This operation varies with the specific need for which you are growing the plants. In general practice allow four weeks from planting until the first pinch, and three weeks for each successive pinch thereafter. All time pinching centers around the last pinching date, which is the recommended pinching date in our Catalog for normal blooming. If you cannot make the pinch on this date, it is better to make the last pinch a few days later than to make it earlier. If your pinching has been timed right, you will have very little trouble with the large Mums developing crown buds, and the spray on the Pompons should be perfect. If for some reason, due to your particular locality, the large Mums develop the crown bud instead of the terminal bud, then pinch a week later than recommended. If the Pompon spray is too open, then pinch one week later, or if it should be too tight, then pinch this particular variety one week earlier the next season. By doing this, you can grow the type of spray your particular market desires.

The last pinching time for cut flowers under controlled blooming procedures is usually about four weeks before shade is applied. For pot plants under these procedures, this pinch is usually made at about the same time or shortly after shade is applied.

SHADING

When using shade on Pompons, the shade must be continued until the whole bed is uniform in color. In the case of large Mums, the shade can be removed as soon as all the buds are selected.

WHAT CAUSES PREMATURE BUDDING OF CHRYSANTHEMUMS DURING THE SPRING MONTHS, AND WHAT TO DO TO PREVENT IT

Bud initiation can occur anytime during the spring months, whenever your temperatures in the greenhouses are consistently 60 degrees Fahrenheit or above, and the days are short enough to initiate bud setting. These conditions can occur anytime up until May 1st depending upon the variety and the locality in which they are being grown. Some varieties such as the garden varieties and early shading varieties require very little short day treatment, coupled with high temperatures to initiate buds. This same tendency to set bud readily is what makes these varieties desirable for early shading and garden work.

In order to prevent this premature setting of buds, these same varieties should be placed where they can be given additional light during the early spring months. Use 60 watt bulbs spaced 4 feet apart and 30 inches above the plants. Use the lights for a period of two hours each night after dark up until May 1st, then discontinue lighting.

New Introductions for 1953

New Garden Varieties By DePetris

ORLOMA . . . Luminous apricot bronze full decorative type. Bushy cushion habit of growth and very free and durable.
Early blooming September 15th.

MADAME CADILLAC . . . Mulberry wine red solid large pompon type of great substance. Strong bushy and compact habit. Blooms by September 20th and lasts well into late October.

DWIGHT DOUGLAS . . . Dazzling golden yellow large decorative. Medium tall and very free and excellent for cutting. Blooms October 5th to 8th.

ORSONA . . . Reddish bronze full decorative type. Very good bushy growth. Very desirable and showy. Blooms September 20th to 25th.

MIGUEL . . . Radiant raspberry red decorative type with good keeping qualities. Good growth and stem. Makes an excellent cut flower. Blooms October 8th to 10th.

GENISTA . . . Very early solid yellow pompon of good size. Dwarf bushy habit. Blooms from the end of August but in full bloom by September 12th.

ORPHEUS . . . Brilliant Roman red large pompon with perfect full form and very hard substance. Excellent strong and long stems with perfect spray formation. Very vigorous clean upright growth. Matures October 10th to 12th. This variety is equal if not superior to any cloth house red now in existence. Blooming nicely for early October and can be shaded to bloom in late August and early September without fading.

New Greenhouse Varieties

DISCLAIMER

We make no warranty, expressed or implied, as to kind, description, quality or productiveness of any stock and we will not be responsible for crop. We will not be responsible for any errors or omissions and in no event shall our liability for any claim of loss or damage due to any cause whatsoever be greater than the invoice value of the merchandise. This order, if accepted, is subject to pro-rata delivery if conditions in our sole judgment justify it, either on account of short crop, prior sale or for any other reason. We will not be responsible for delays, damages or loss in transit. Our liability ceases upon delivery to the common carrier. All orders subject to acceptance by home office.

Bird Vita-Bands

Vita-Band D with its hardened outercoating, rigidly contains root growth—except for extra long growing periods—until grower chooses to let root through Band. Only quick, slight pressure is needed to crack Band. Then Band disintegrates in the soil, permitting free growth of root from time of transplant. Nutrient-treated with quickly available plant food.

Vita-Band 10 will usually contain root growth up to approximately 8 to 10 weeks. Nutrient-treated with quickly available plant food . . . your judgment determines need for additional feeding. Especially good for annuals and vegetables. Vita-Band "10" should be removed at time of transplant.

Vita-Band "D" is packed 2,000 to the case—except sizes 3" by 3", 4" by 3", and 4" by 4", which are packed 1,000 to the case. Vita-Band 10 is packed 1,000 to the case—except for 4" by 3", and 4" by 4", which are packed 500 to the case.
